

### **Description of a Preferred Embodiment**

In a preferred form of the invention a hollow plastic container 1 snaps apart into two sections 2, 3. The snapping mechanism 4 is such that the container may be snapped apart, filled and then snapped together for shipment. The container is supplied to the consumer with a mailing label, 5 and a re-enforcing adhesive strap for shipping.

The above description is a preferred embodiment and it not intended to limit the scope of the claims made herein.

What is claimed is:

1. A shipping container comprising:  
Two parts which may be disconnected and re connected for the purpose of filling the container  
An exterior artistic design intended to evoke a response in the receiver at the moment of reception.
2. A shipping container as in claim 1 manufactured of plastic and supplied with a mailing label for the end user
3. A shipping container as in claimed in 2 designed as an Owl
